                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a recombinant DNA construct of a (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors the construction of transgenic plant and animal cells expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant DNA construct comprising a plant centromere, producing stably inherited michrosomes which can serve at the construction of transgenic plant and animal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 102; Page 804-819; 1449pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      selected proteins such as hormones, enzymes, interleukins, clotting

Sequence 11, Application US/09322478

Patent No. 6331662

GENERAL INFORMATION:
APPLICANT: Wiight, David A.
APPLICANT: Wiight, David A.
APPLICANT: Woytes, Daniel F.
TITLE OF INVENTION: Plant Retroelement
CURRENT APPLICATION NUMBER: US/09/322,478

CURRENT APPLICATION NUMBER: US/09/322,478

CURRENT APPLICATION NUMBER: 60/087125

EARLIER APPLICATION NUMBER: 60/087125

EARLIER APPLICATION STATE: 1998-05-29

NUMBER OF SEQ ID NOS: 41

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 11

LENGTH: 600

TYPE: DNA

ORGANISM: Artificial Sequence
FEATURE:
COURSE TO THE STATE OF SECTION OF A STATE OF A STATE OF SECTION OF A STATE OF ; OTHER INFORMATION: Description of Artificial ; OTHER INFORMATION: retroelement sequence US-09-322-478-11 Query Match
